Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Verification of the pedigree

In October 2017 verification on SNP started up

Microsatellite are still used but decrease all the time in numbers

Follow the ICAR guidelines

- Test on minimum 196 SNP's (ICAR), but often more
- When searching for a sire and MGS verification is done on 554 SNP's for sire and 875 SNP's for MGS
- All three countries have ICAR accreditation

Very reliable method

NAV

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

What can we verify

- Need SNP's from the involved animals
- Confirm only pedigree from animals with a SNP
- Three ancestors can be confirmed
 1. Sire
 2. Dam
 3. Maternal grand sire

Nordisk Avlsværdi Vurdering • Nordic Cattle Genetic Evaluation

Bonus with verification of pedigree by genotype

Do it the easy way – Use DNA ear tags

Advantages of a genomic test

- Verification of the pedigree including the maternal sire
- Search for possible pedigree
- Genomic values
- Monogenetic traits

Joint benefit through a better reference population
